

# DUTCH ROWHOUSES IN VALKENSWAARD

Finished row houses

## TIPS FOR MAKING THIS PAPER BUILDING

- Print on heavy weight paper (125lb. or 200g/m2). Allow to dry.
- Cut out the building parts with a sharp hobby knife. Use a metal ruler to cut along straight lines.
- Mark the folding lines on the blank sides of the building faces. Use the hobby knife to score the lines.
- Fold building walls using your fingernail to make the folds sharp. Make the corners square. Fit the building together to see how it looks.
- Cut the base out of cardboard or styrofoam. Glue the base a few millimeters from the bottom edge of the building. The small gap between the base and the bottom of the walls will allow the building to sit in your terrain rather than on top of it.
- Cut slits in the roof to accommodate the gables. Fold the gables' sides and upper tabs back. Insert the side tabs into the roof slits and glue in place. Fold the gables' roofs, check the fit and trim so they will sit flush on the main roof. Glue in place.
- Trace the shapes of the short sides of the building on styrofoam to make roof supports. Cut and trim to fit inside the walls. Check how the roof fits and fold it accordingly. The roof should overhang the building slightly, so glue the supports a few millimeters in from each end of the roof.
- Attach chimneys and details as desired.
- You may wish to spray a protective matte varnish on your finished building.
